

MySQL Primer

```
CREATE TABLE books (bookid int auto_increment, title varchar(30), author  
varchar(30), primary key(bookid) );
```

```
ALTER TABLE books ADD COLUMN price float;
```

```
ALTER TABLE books DROP COLUMN price float;
```

```
ALTER TABLE books CHANGE price cost float;
```

```
INSERT INTO books (bookid, title, price) VALUES (null, "Where the Red Fern  
Grows", 15.75);
```

```
DELETE from books where bookid = 2;
```

```
UPDATE books set price = 12.50 where bookid = 1;
```

```
SELECT * from books;
```

```
SELECT * from books WHERE price > 20.00;
```
